主要统计指标解释

地区生产总值(GDP) 指一个国家(或地区)所有常住单位在一定时期内生产活动的最终成果。地区生产总值有三种表现形态,即价值形态、收入形态和产品形态。从价值形态看,它是所有常住单位在一定时期内生产的全部货物和服务价值超过同期投入的全部非固定资产货物和服务价值的差额,即所有常住单位的增加值之和;从收入形态看,它是所有常住单位在一定时期内创造并分配给常住单位和非常住单位的初次收入分配之和;从产品形态看,它是所有常住单位在一定时期内最终使用的货物和服务价值与货物减去进出口货物和服务。在实际核算中,生产总值有三种计算方法,即生产法、收入法和支出法。三种方法分别从不同的方面反映生产总值及其构成。

三次产业 是根据社会生产活动历史发展的顺序对产业结构的划分,产品直接取自自然界的部门称为第一产业,对初级产品进行再加工的部门称为第二产业,为生产和消费提供各种服务的部门称为第三产业。它是世界上较为通用的产业结构分类,但各国的划分不尽一致。2012年前的三次产业划分标准按照当年《统计年鉴》,从2013年起,三次产业划分调整为:

第一产业是指农、林、牧、渔业(不含农、林、牧、渔服务业)。

第二产业是指工业[采矿业(不含开采辅助活动),制造业(不含金属制品、机械和设备修理业),电力、热力、燃气及水生产和供应业]和建筑业。

第三产业即服务业,是指除第一产业、第二产业以外的其他行业。

不变价格 指用同类产品的年平均价格作为固定价格,来计算各年产品价值。按不变价格计算的产品价值消除了价格变动因素,不同时期对比可反映出生产的发展速度。新中国成立后,随着工农业产品价格的变化,国家统计局先后五次制定了全国统一的工业产品不变价格和农业产品不变价格,从1949年到1957年使用1952工(农)业产品不变价格,从1957年到1971年使用1957年不变价格,从1981年到1990年使用1980年不变价格,从1990年开始使用1990年不变价格。

Explanatory Notes on Main Statistical Indicators

Gross Domestic Product (GDP) refers to the final products of all resident units in a country (or a region) during a certain period of time. Gross domestic product is expressed in three different forms, i. e. value, income, and products respectively. The form of value refers to the total value of all products and services produced by all resident units during a certain period of time minus total value of intermediate input of materials and services of the nature of non – fixed assets or the summation of the value – added of all resident units; the form of income includes all the income created by all resident units and distributed primarily to all resident and non – resident units; the form of products refers to the value of all final goods and services for final use by all resident units minus imports of goods and services during a given period of time. In the practice of national accounting, gross domestic product is calculated with three approaches, i. e. production approach, income approach, and expenditure approach, which reflect gross domestic product and its composition from different aspects.

Three Industries Industry structure has been classified according to the historical sequence of development. Primary industry refers to extraction of natural resources; secondary industry involves processing of primary products; and tertiary industry provides services of various kinds for production and consumption. The above classification is universal although it varies to some extent from country to country. The explanatory notes on Three Industries were available on Hangzhou Statistical Yearbook of the year before 2012, and the indicators of Three Industry have been revised according to the national standards since 2013.

Primary Industry refers to agriculture, forestry, animal husbandry and fishery industries (excluding their service activities).

Second Industry refers to industry [mining and quarrying (excluding its support activities), manufacturing (excluding the repair services of metal product, machine and equipment), production and supply of electricity, heat, water and gas] and construction.

Tertiary Industry is the service industry, refers to all other economic activities not included in the primary or secondary industries.

Labourer's Remuneration refers to the whole payment of various forms earned by the labourers from the productive activities they are engaged in. It includes wages, bonuses and allowances the labourers earned in monetary form and in kind. It also includes the free medical services provided to the labourers and the medicine expenses, traffic subsidies and social insurance free paid by the labourers' working units for them. As the individual economy is concerned, since the labourers' remuneration is not easily distinguished from the operating profit, both are treated as labourers remuneration.

Net Taxes on Production refers to the residual of the taxes on production minus the subsidies on production. The taxes on production refer to the various taxes, extra charges and fees levied on the production units on their production, sale and business activities as well as on some factors of production, such as fixed assets, land and labour force, used in the production activities they are engaged in. In contrast to the taxes on production, the subsidies on production refer to the unilateral transfer of part of the government's revenue to the production units and is therefore regarded as negative taxes on production. They include subsidies on the loss due to implementation of government policies, price subsidies to the grain institutions, foreign trade corporations' receipts from drawback, etc.

Depreciation of Fixed Assets refers to the depreciation of fixed assets of a given period, drawn in accordance with the stipulated depreciation rate for purpose of compensating the wear loss of the fixed assets of the depreciation of fixed assets calculated in a fictitious way in accordance with the stipulated unified depreciation rate in the national economic accounting system. It reflects the value of transfer of the fixed assets in the production of the current period. The depreciation of fixed assets in various enterprises and institutions managed as enterprises refers to the depreciation expenses actually drawn and calculated as part of the cost. In government agencies and institutions not managed as enterprises which do not draw the depreciation expenses, as well as for the house of residents, the depreciation of fixed assets is the imputed depreciation, which is calculated in accordance with the stipulated unified depreciation rate. In principle, the depreciation of fixed assets should be calculated on the basis of the repurchased value of the fixed assets. However, there is no actual condition to reevaluate all the fixed assets in China. Therefore, the abovementioned methods are temporarily adopted at present.

Operating Surplus refers to the balance of the value added created by the resident units deducting the labourers' remuneration, net taxes on production and the depreciation of fixed assets. It is equivalent to the business profit of the enterprises plus subsidies on production, but the wages and welfare expenses paid from the profits should be deducted.

Comparable Price is applied when comparing value indicators of different periods to reflect accurately the changes in physical value. The price is not considered here. Two methods are used for calculating comparable prices: 1. Multiplying the output of products by their constant price of a certain year; 2. Conversion of the data in current prices by relevant price index.

Constant Prices refer to the average price of a given produce in a certain year, which is used to calculate the output value over time. As the output value at constant prices removes the factor of price changes, it reflects the trend of production development over

time. Since 1949, with the changes in general price level, the State Statistical Bureau has issued nationally unified constant prices for five times, the 1952 constant prices for 1949 – 1957; the 1957 constant prices for 1958 – 1970; the 1970 constant prices for 1971 – 1981; the 1980 constant prices for 1981 – 1990; the 1990 constant prices have been used since 1991.
